ANGLED POST FITTINGS 55

How to use the "Ix" table
-The column on the left lists pitch angles $\alpha$ from $0^{\circ}$ to $60^{\circ}$. Select the row which lists the pitch angle you need for your appication.

- Now, look for the outside diameter d1 that you want your post fiting to have. Length IX (see adjacent ilustration for detaiss is isted where
this column intersects with your pitch angle row. - For each post fiting, length Ix is important for defining the assembly length. If you wish to use an external thread instead of a countersunk by adding the protruding length of the screw.

OF POST FITTINGS
If you indicate the pitch angle $\alpha$ (and the pipe e
if your post is round), we will supply the matching
post fitting for any application.
