## VARIBALL ${ }^{\oplus}$ TEMPLATE

## Sketch

 stopsSketch
d1 $=$ After milling Drilling procedure $\mathbf{d 2}=$ Ball $\varnothing-1 \mathrm{~mm} \quad$ - Predrill (about 2 mm less than rated $\varnothing$ ) $\begin{array}{ll}\mathbf{d 2}=\text { Ball }-1 \mathrm{~mm} & \text { - Finish with VARIBALL } \\ \mathbf{k}=\text { Wall thickness } & \text { - Accurately set depth stop }\end{array}$
$\mathbf{k}=$ After milling

- Clamp workpiece tightly

## VARIBALL ${ }^{\circ}$ DEFLECTION ANGLE

 The VARIBALL® is designed to be retained inflat sections. A special milling tool is required to
produce the match ing hole. produce the matching hole.
VARIBALL $\oplus$ types MKI to MKIII accept wire
ropes with swaged or welded external threads; ropes with swaged or welded external threads;
type MIVV has a special compression fitting for cut wire rope ends.
Within the cone defined by the deflection angle,
the longitudinal axis of the tensioned wire rope the longitudinal axis of the tensioned wire rope The deflection angle $\alpha$
The deflection angle $\alpha$ applies to the permis
sible longitudinal axis of the wire rope. The maximum deflection angle $\alpha$ max. defines the envelope of the cone. The $\alpha$ max. values ar
listed in the product tables for MkI to MkIV on listed in the product tables for MKI to MkIV on page 5

## 4

The use of JAKOB VARIBALL® fitings calls for careful planning and execution!
